Composting is easy and fun, it saves you money and helps you grow lovely plants. More importantly, it is good for the environment, as it massively reduces the amount of noxious methane gas generated from burying food waste in landfill. It's great for the soil and a great way to learn about nature. Written by Nicky Scott, the author of *Reduce, Reuse, Recycle*, this book shows you how to go about composting.

Nicky is an activist who has been teaching composting for years. He explains why making compost is so important for healthy soil and the environment, how it works and how to make your own compost, in spaces big and small. He shows how different composting systems work including cold composting, wormeries, bokashi and hot boxes and gives guidance on the most appropriate for your site.

Praise for first edition:

Clearly written and cross-referenced, this book draws on a wide composting experience.

- Sue Stickland, author of 'Back Garden Seed Saving'

How to Make and Use Compost shows you how to compost food and green waste:

- Creating the right mix for successful composting
- How to compost food waste safely
- Making liquid feeds and potting compost from your homegrown compost
- Community Composting

The book features an A-Z guide to what you can and cannot compost, composting techniques, common problems and their solutions.
